

Complete the given Java program that takes as input a list of strings, removes the strings that contain , (comma) and/or . (dot) , and prints the remaining strings.

- Class `CollectRes` has/should have the following members:
 - Main method that takes input and invokes method `collectData` to filter the input based on the given conditions.
 - Method `public static Collection<String> collectData(ArrayList<String>)` that filters the given list using methods in class `Stream`, to obtain the specified output.
